

# PP Strap

Polypropylene (PP) strapping is a lightweight, flexible, and cost-effective strapping option for light to medium-duty packaging needs. It's commonly used for bundling, palletizing, unitizing, carton closing, and other warehousing operations. PP strap is rust-proof and non-corrosive, making it perfect for the safe handling, storage, and transportation of packaged goods.

PP strapping is highly effective in manual, semi-automatic, and fully automatic strapping machines, as well as with hand tools. Its smooth and homogeneous surface enables consistent sealing.

## Key Features

- Made from high-quality polypropylene (PP).
- Lightweight and resilient for efficient handling.
- Available in various widths, thicknesses, and lengths.
- Superior elastic recovery (memory) for stress absorption.
- Environmentally friendly and recyclable material.

## Ideal for heavy-duty and high-value packaging

Palletized goods, Bricks, tiles, and construction materials, Paper reels and corrugated boxes, Steel coils and metal products (steel replacement), Cotton bales and fiber packaging, Logistics, export, and long-distance transportation, Fully automatic strapping lines.

## Why Choose Our PP Straps

- **Customized Solutions:** Straps available in tailored widths, thicknesses, colours, and roll lengths as per customer requirements
- **Consistent Quality:** Manufactured using reliable, high-grade raw materials ensuring uniform strength and performance
- **Machine Compatibility:** Designed for smooth operation in high-speed strapping machines with minimal breakage
- **Reliable Supply:** Strong manufacturing and supply capability for domestic and export markets
- **Cost Competitiveness:** High performance at market-competitive pricing
